"Allstate Resilient Flooring, Since 1958"

ALLSTATE RUBBER TILE + THE ENVIRONMENT:

Allstate rubber tile is **free** of PVC, CFC'S halogens, formaldehyde and plasticizers.

All elements utilized in the manufacturing process are at levels substantially below European safety limits.

All water + gas emissions from our plant are regularly tested by local authorities and fall well below their statutory limits.

Over **99%** of waste material from production is recycled within the manufacturing facility.

A number of firms specialize in the recycling of rubber waste into products for industrial, sporting, equestrian installations, road construction (asphalt rubber hybrid) and roof tiles. Once such recycler of rubber is Rubberworks, www.rubberworks.com

As ALLSTATE rubber tile is **free** of PVC, CFC, halogen, formaldehyde, asbestos and other toxic elements it can be safely disposed of.

Because ALLSTATE rubber tile is halogen free it does **NOT** emit dioxones or furnanes in the event of fire.

The exceptional durability, resistance to wear and tear as well as stability result in a product lifespan that far exceeds other forms of resilient flooring.
